

Maayan Oshri

Junior Software Engineer

maayanoshri1904@gmail.com | 053-331-4162 | North | [GitHub](#)

SUMMARY

- Highly motivated **Computer Science student** (B.Sc. track via **the prestigious Odyssey Program for gifted youth**) with a **93.6 GPA**.
- Deeply passionate about **Artificial Intelligence, search algorithms, and data analysis**, alongside a strong foundation in **low-level system architecture**.
- Eager to leverage my skills in a **part-time / student position**, contributing to an **innovative engineering, AI, or software development team**.

TECHNOLOGIES

- **Programming & Web:** Python, C, C++, JavaScript, Node.js, Java, C#, x86 Assembly
- **Core CS & Infrastructure:** Artificial Intelligence, Docker Containerization, Algorithm Design, Data Structures, Operating Systems, OOP
- **Data & Math:** Deep Learning (LSTM, PyTorch, TensorFlow), NumPy, Pandas, Olympiad-level Mathematical Reasoning

EDUCATION

2022 – Present: **B.Sc. in Computer Science (In Progress)** | **Tel-Hai College University**
(Odyssey & Ascola Programs for gifted high school students)

- Completed **over 80%** of degree coursework, gaining both **academic foundation and hands-on practical** experience in **Python, C++, Assembly, Computer Networks** and **Machine Learning**

HANDS -ON ACADEMIC PROJECTS

AI, Data Analysis & Backend Development

- **Developed** an advanced Insider Threat Detection system utilizing deep learning (LSTM models) for log anomaly analysis, integrating **Python** machine learning modules with a **C++** data-gathering backend.
- **Designed** and deployed backend microservices using **Node.js** and integrated **Docker containerization** for scalable system architecture.
- **Implemented** complex search algorithms, Constraint Satisfaction Problems (CSPs), and genetic optimization techniques to solve advanced algorithmic models.
- **Performed** advanced data processing and mathematical modeling utilizing **Python** libraries (including NumPy and Pandas) for complex matrix operations and data visualization.

Software Architecture & Systems Development

- **Developed** complex software projects emphasizing low-level programming in **C, C++, and x86 Assembly** to build high-performance foundational systems.
- **Applied** deep practical knowledge of operating system concepts, including memory management, page tables, and NRU algorithms to implement custom operating system enhancements.
- **Designed** scalable software systems utilizing OOP principles, UML modeling, and advanced design patterns (e.g., Observer, Decorator) to develop a sophisticated investment tracking and optimization platform.

VOLUNTEERING ACTIVITIES

Teaching Assistant, Odyssey Program for Gifted Youth | Tel-Hai College

- **Mentoring** and guiding highly gifted students through advanced Computer Science coursework and complex algorithmic problem-solving.
- Assisting in translating high-level **academic concepts** into practical coding assignments, conducting code reviews, and fostering strong software engineering fundamentals

LANGUAGES

Hebrew: Native | **English:** High level
